

This Twister's rhombus-shaped rotation attracts children to rotate and climb to the top, over and over. It provides play for children across ages, encouraging social play across different age groups. It's a particular favourite of older children who can stand, sit and chat while rotating and experience thrilling, stomachtickling play. The Twister's middle steel rings
allow for more children pushing and pulling the Twister from the outside. The two rings provide good support for sitting, hanging in arms or standing, for many children, while rotating. This is hugely thrilling, it makes children come back again and again. And not least, it trains children's motor skills, muscle strength and bone density when they climb, push, pull, hang
in arms and jump off. The negotiation of who does what to turn the Rhombus Twister net trains social-emotional skills such as turntaking, tolerance and empathy. This is a playful way to make friends.

## Rhombus Twister

Vertical net rungs
Physical: Support climbing and cross-coordination, which benefits children's body confidence as well as their cross-modal perception. Supports leaning and holding tight when rotating which is phenomenal for sense of balance and respectively the hand and arm strength. Support pushing and pulling for younger

Top steel ring
Social-emotional: Supports thrill: heights and rotation. Sectioned to fit more children. children, which trains arm strength and supports faster running, which is good cardio training.
Social-emotional: Vertical rungs section the horizontal nets or steel rings, which eases meeting for less confident children.

Horizontal net rungs
Physical: Support climbing which is good for cross-body coordination and thus cross-modal perception, which is needed e.g. for reading. supports standing, hanging in knees, and varied body positions. Social-emotional: Supports seating and meeting across heights.
 unning dividers for meeting

Rotation
Physical: pushing or pulling it into motion, children use their muscle strength and strengthen their cardio. The rotation develops the sense of balance and space when enjoying the ride. social-emotional: listening and negotiating how and cooperation skills.

Corocord ropes with 19 mm diameter or more are special 'Hercules' - type with galvanised sixstranded steel wires. Each strand is tightly wrapped with PES yarn, which is melted onto each indivudual strand. The ropes are highly wear-and vandalism-resistant and can be replaced at site if needed. texture.

Corocord 'S' clamps are used as universal connections in Corocord products. 8 mm stainless steel rods with rounded edges are pressed around the ropes with a special hydraulic press, making them the ideal connector: safe, durable and vandalism-proof, all while allowing the typical movement of rope play structures.

All decks are supported by a unique steel construction with multiple deck supports and fixations. The HPL decks with a thickness of 17.8 mm have a very high wearing strength and feature a unique KOMPAN non skid surface

The steel posts are hot dip galvanised inside and outside with lead free zinc. The galvanisation has excellent corrosion resistance in outside environments and requires low maintenance.

Heavy duty engineered bearing system with single row deep groove ball bearings with rubber seals. The fully closed bearing construction is lifetime lubricated and maintenance free. The Bearing system has an integrated drag brake according to global safety standards.

Validation of $\mathrm{CO}_{2}$ calculation of: Corocord

## Data version no. 2021-09-2

The $\mathrm{CO}_{2}$ calculation and data are in compliance with the principles of a carbon footprint impact according to the GHG protocol (Greenhouse Gas Protocol), Scope 3, cradle to gate related to all individual components in the product category: "Corocord" represented by item no. COR314011-1101.
(Scope 3 emissions include emission sources in the upstream and downstream value chain).
Date: 15. October 2021 | Valid until: 15. October 2023 Validated by:
