

MSV605 Low Slope

The low slope is a great physical play unit that can be climbed, crawled, slid, and lied on also by the younger toddlers. Crawling, climbing or walking on slopes is a fantastic training of the child's vestibular system and kinesthetic: the training of cross-coordination, of balance, proprioception and spatial relations is made in a fun and active way. A Play Book text with curriculum supportive games, made by the KOMPAN Play Institute, can be ordered.
