

Olympus with its open design and variation of fun challenges is a huge attraction. The ground level base of the structure means that everyone can participate. The bouncy membrane bridge is a fun cooperative exercise with its responsive rubber flooring. When a child jumps on one side, the other side rises, pushing the playmate up into the air. A hilarious and thrilling play event that takes cooperation and develops the sense of balance while also building bone density. The monkey bar trains upper body strength, which is important for today's often sedentary children. The twisted net supports cross-body coordination, but can also be a hang-out place as well for social interaction. The ground level base and the transparency of the Olympus invites meetings and activities for all children within a fun, social play frame.
